Weller **Infrared** Services Thermal Imaging Inspection Services

Many building, electrical, and roofing problems are invisible to the naked eye and can be overlooked during a conventional inspection. Our thermal imaging surveys offers a non-invasive method of diagnosing many issues such as moisture damage, electrical and mechanical problems, and building energy loss. We develop detailed, comprehensive reports using **infrared** thermal imaging that helped our clients:

- Receive the most out of their capital expenses allocated for annual building maintenance costs.
- Check the performance of building, roofing and electrical systems before warranties expire.
- Accurately determine repair or replace decisions.
- Extend the useful life of building, electrical, mechanical and roofing systems.
